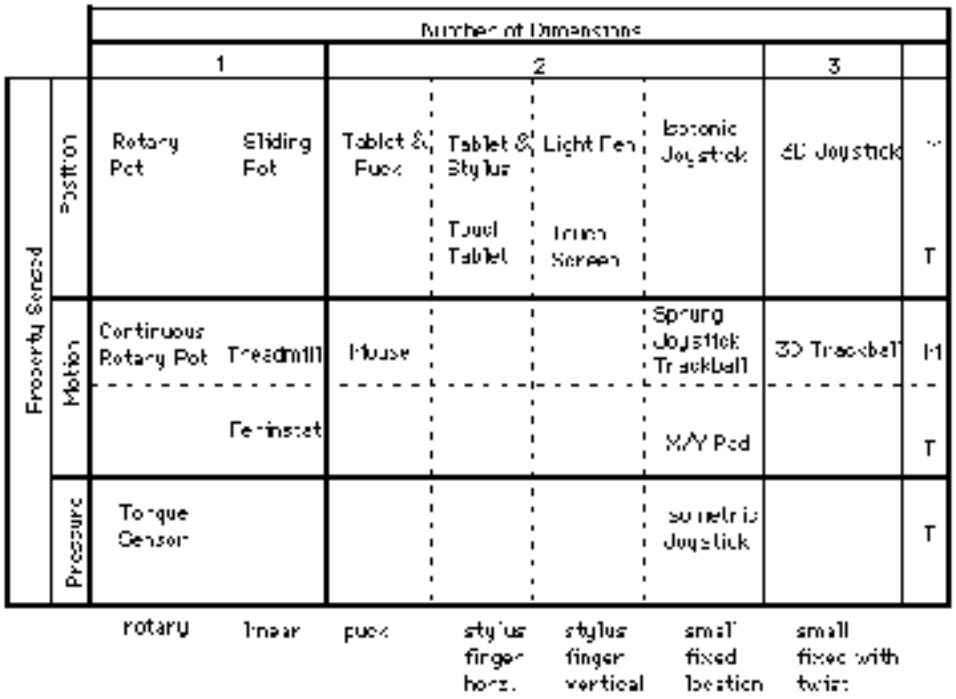
TAXONOMIES



Bill Buxton, 1983
Lexical and Pragmatic Considerations of Input Structures
Computer Graphics, 17 (1), 31-37.

Tâches élémentaires :

- **Select** : pointer un objet (menu, bouton, etc.)
- **Position** : placer un objet sur 1, 2, 3 ou plus de dimensions
- **Orient** : orienter un objet sur 1, 2, 3 ou plus de dimensions
- **Path** : dessiner une ligne, courbe, etc.
- **Quantify** : saisir une valeur scalaire
- **Text** : saisir du texte

Potentiomètres

FILTRAGE

- Problème : données bruitées
- Solution : filtre

- Compromis
  - Bruit : mouvement quand le périphérique est immobile
  - Latence : décalage entre le mouvement du périphérique et du curseur

- Problème : données bruitées
- Solution : filtre

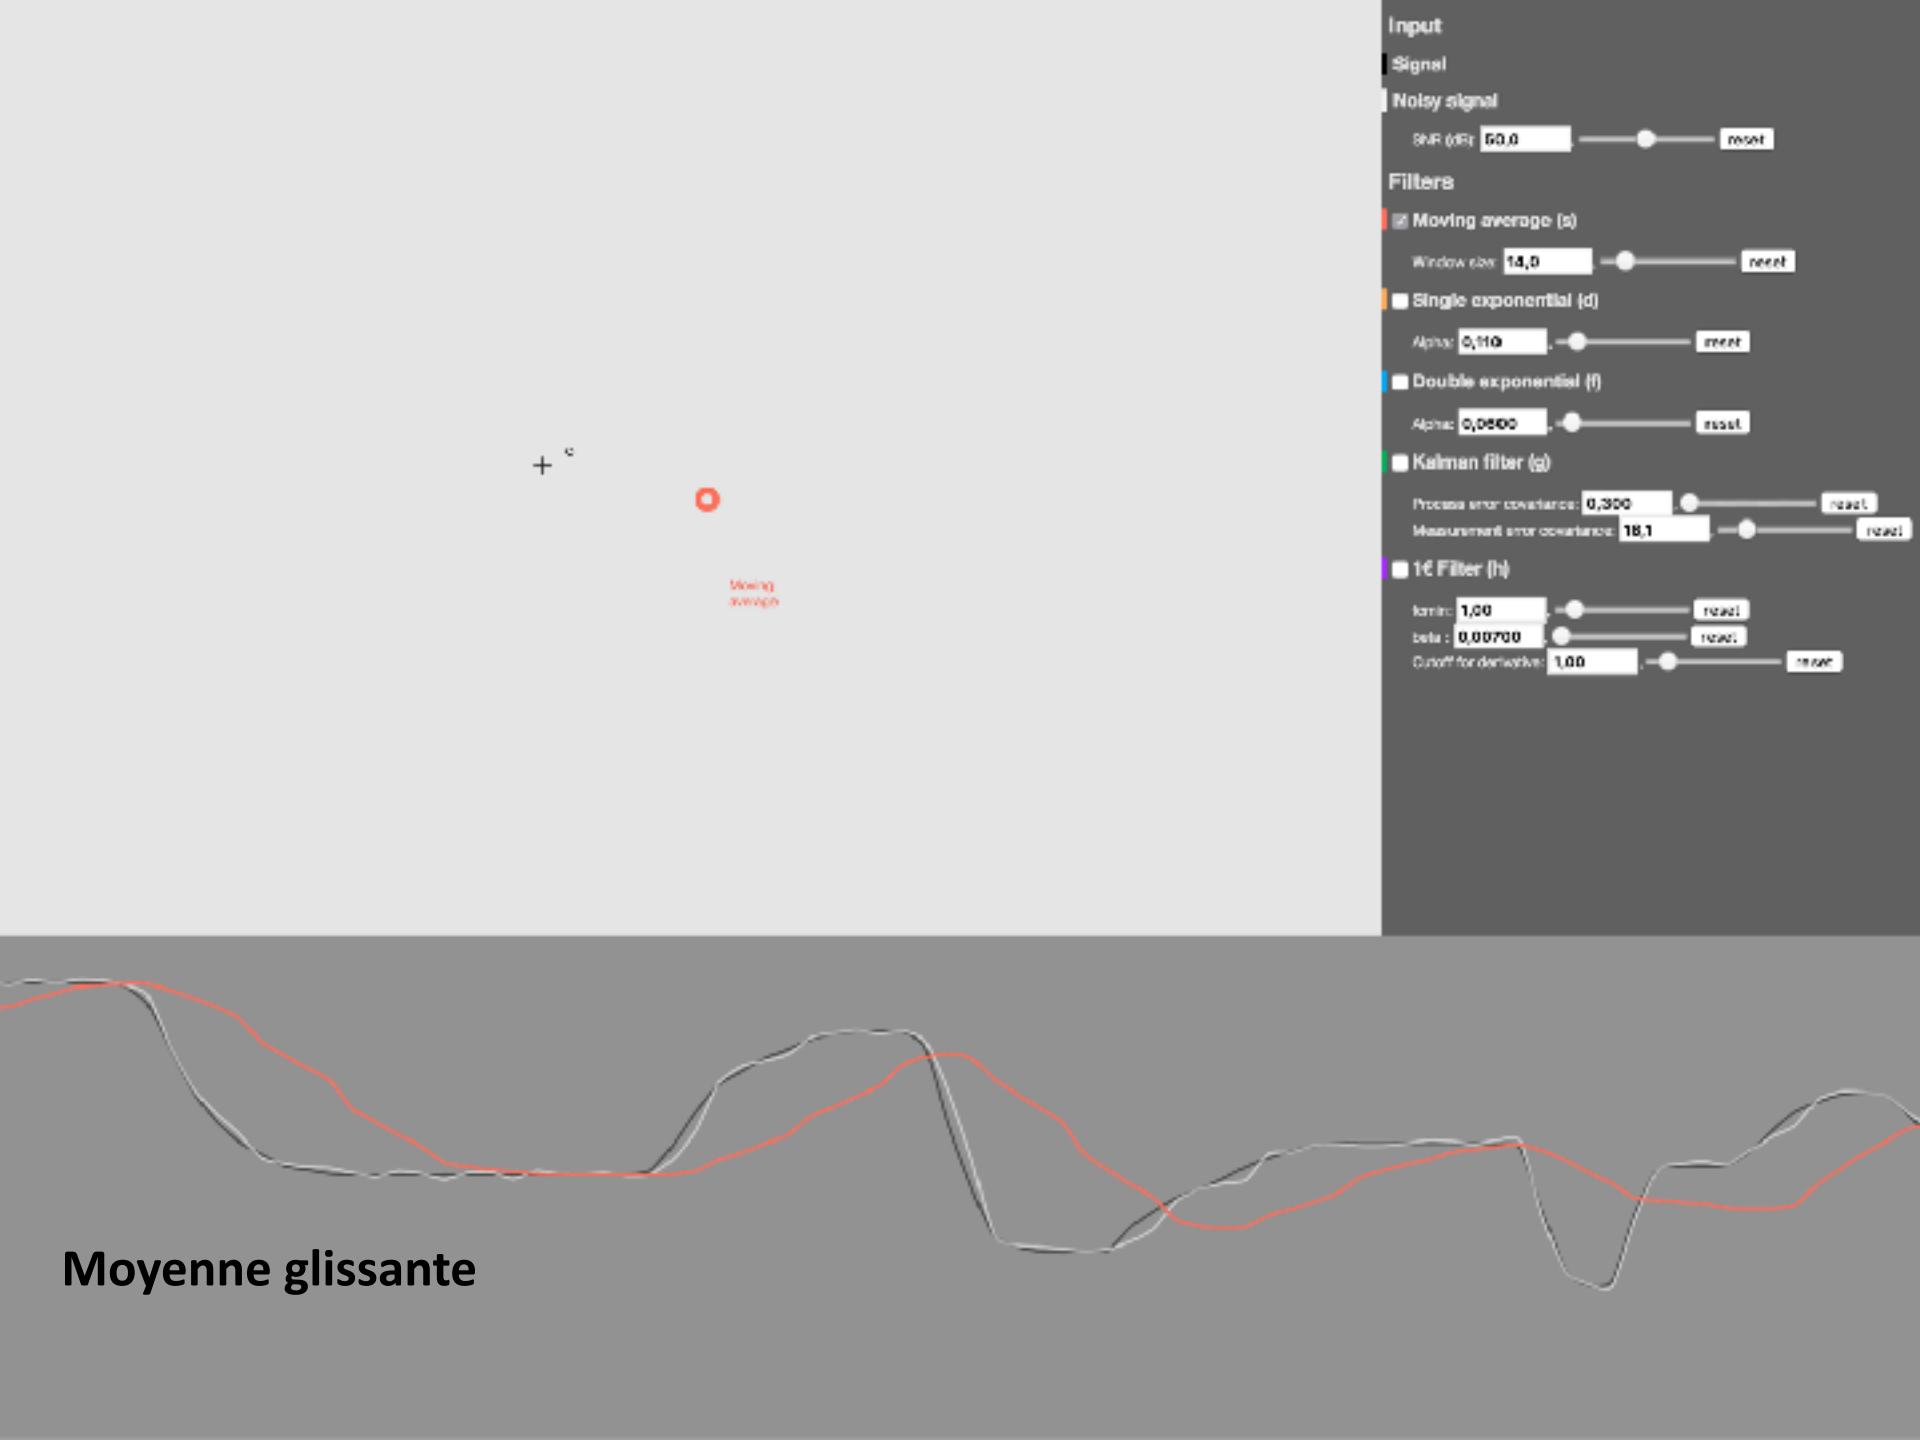
- Compromis
  - Bruit : mouvement quand le périphérique est immobile
  - Latence : décalage entre le mouvement du périphérique et du curseur

Moyenne sur les x dernières valeurs

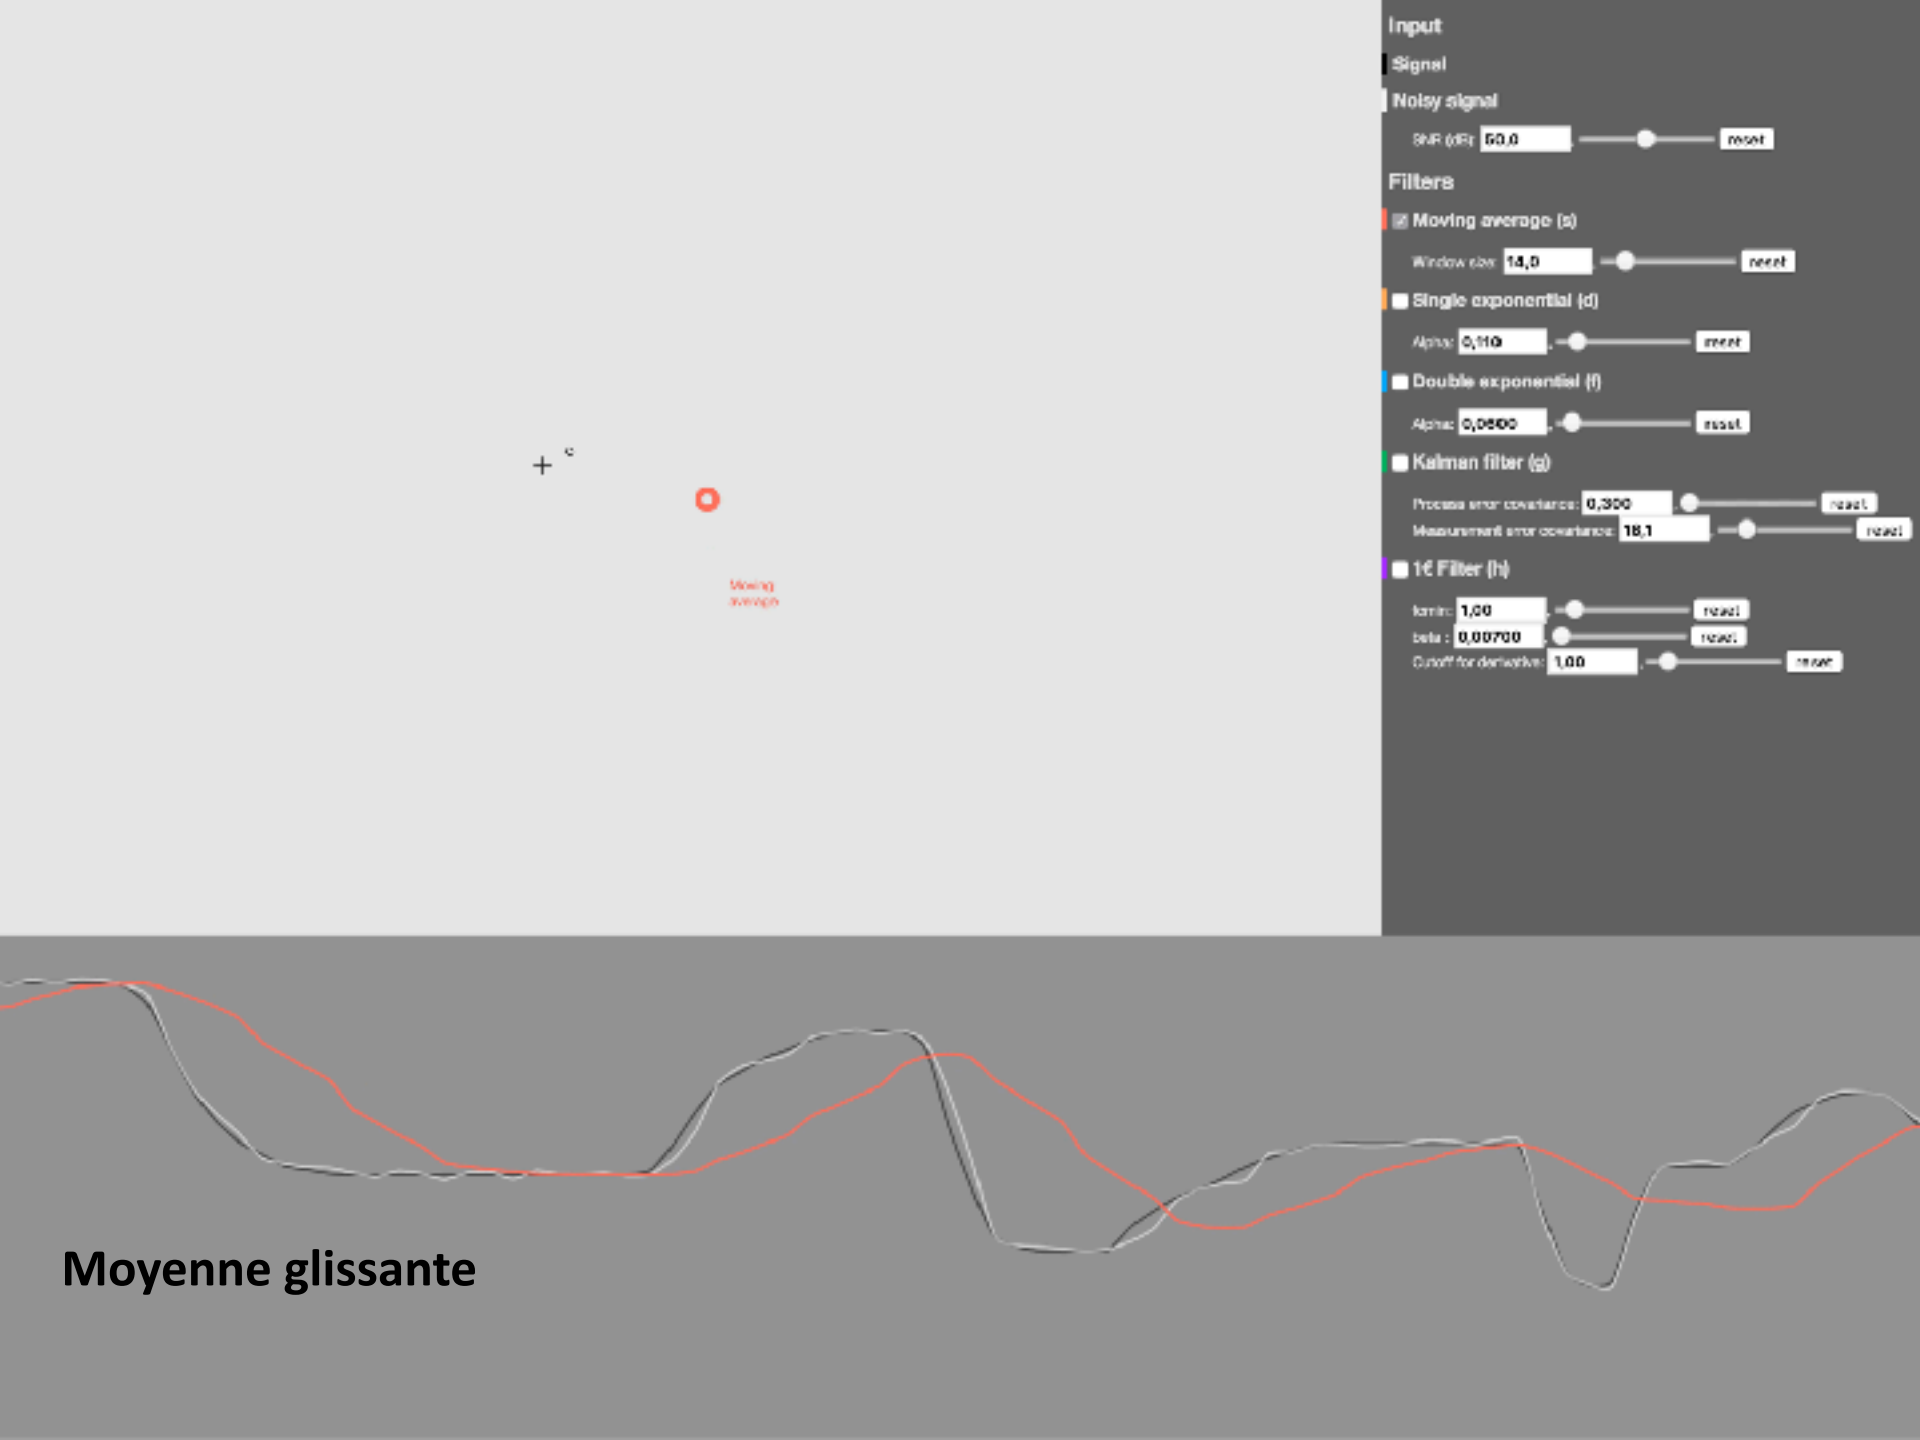
Lissage des points ⇒ gomme les mouvements brusques

\+ Facile à implémenter

\- Latence importante



Moyenne glissante



Moyenne glissante

Moyenne glissante dont le poids des valeurs décroit

Simple exponentiel

Double exponentiel

+ Facile à implémenter
- Latence importante

$$\hat{X}_i = \alpha X_i + (1-\alpha)\hat{X}_{i-1}$$

$$\hat{X}_i^{[2]} = \alpha \hat{X}_i + (1-\alpha)\hat{X}_{i-1}^{[2]}$$

$$P_{t+\tau} = \left(2 + \frac{\alpha\tau}{1-\alpha}\right)\hat{X}_i - \left(1 + \frac{\alpha\tau}{1-\alpha}\right)\hat{X}_i^{[2]}$$

Filtre passe bas à fréquence de coupure variable

Filtre peu lorsque les mouvements sont rapides ⇒ peu de latence

Filtre beaucoup quand les mouvements sont lents ⇒ peu de bruit

+ Efficace
+ Facile à régler
+ Facile à implémenter

APPENDIX A - 1€ FILTER

Algorithm 1: 1€ filter

EXT: First time flag: *firstTime* set to *true*
Data update rate: *rate*
Minimum cutoff frequency: *mincutoff*
Cutoff slope: *beta*
Low-pass filter: *xfilt*
Cutoff frequency for derivate: *dcutoff*
Low-pass filter for derivate: *dxfilt*
IN : Noisy sample value: *x*
OUT: Filtered sample value

```
1 if firstTime then
2 |   firstTime ← false
3 |   dx ← 0
4 else
5 |   dx ← (x - xfilt.hatxprev()) * rate
6 end
7 edx ← dxfilt.filter(dx, alpha(rate, dcutoff))
8 cutoff ← mincutoff + beta * |edx|
9 return xfilt.filter(x, alpha(rate, cutoff))
```

Algorithm 2: *Filter* method of Low-pass filter

EXT: First time flag: *firstTime* set to *true*
IN : Noisy sample value : *x*
Alpha value : *alpha*
OUT: Filtered value

```
1 if firstTime then
2 |   firstTime ← false
3 |   hatxprev ← x
4 end
5 hatx ← alpha * x + (1 - alpha) * hatxprev
6 hatxprev ← hatx
7 return hatx
```

Algorithm 3: Alpha computation

IN : Data update rate in Hz: *rate*
Cutoff frequency in Hz: *cutoff*
OUT: Alpha value for low-pass filter

```
1 tau ← 1.0 / (2*π*cutoff)
2 te ← 1.0 / rate
3 return 1.0 / (1.0 + tau/te)
```

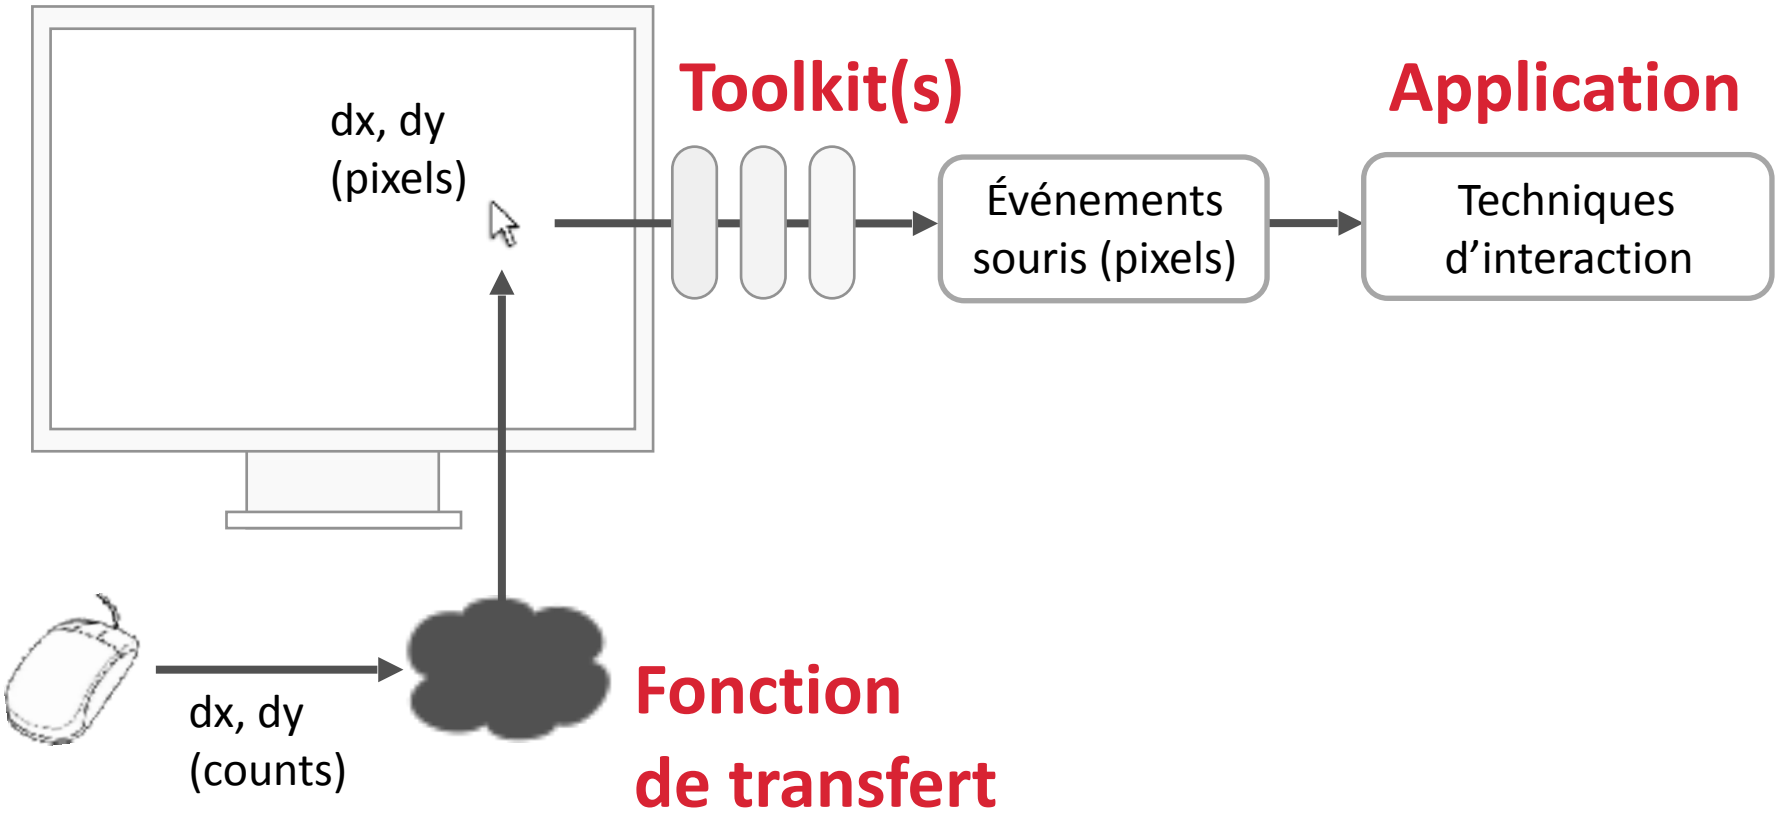
FONCTIONS DE TRANSFERT



dx, dy
(pixels)
Toolkit(s)
Application
Événements
souris (pixels)
Techniques
d'interaction
dx, dy
(counts)
Fonction
de transfert

De combien se déplace le curseur ?

Contrôle en position

ex : souris

Contrôle en vitesse

ex : joystick

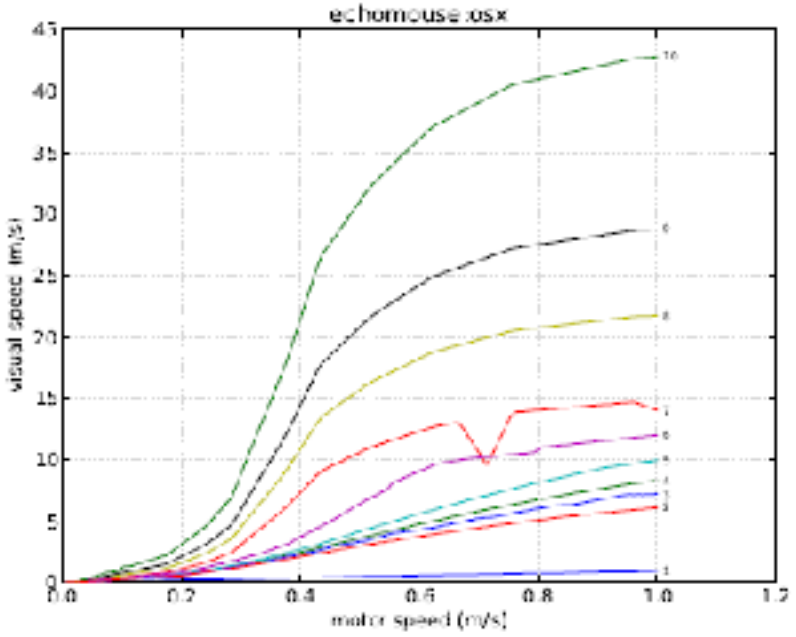
$$CD_{gain} = \frac{V_{pointeur}}{V_{périphérique}}$$

Fonction linéaire

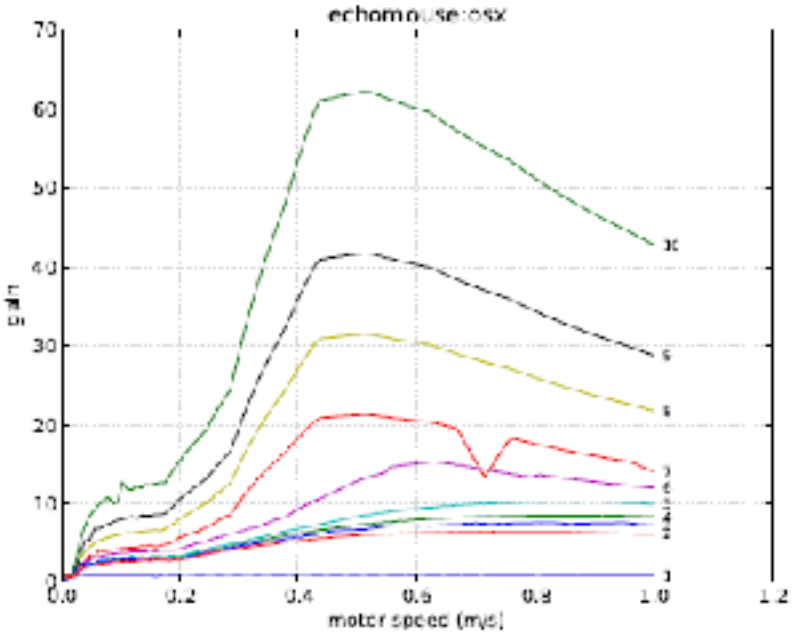
Gain constant

Fonction non linéaire

Gain variable, par exemple en fonction de la vitesse



echomouse.osx
visual speed (m/s)
motor speed (m/s)



echomouse.osx
gain
motor speed (m/s)

Phase balistique

Rapide et imprécise

⇒ gain élevé

Phase corrective

Lente et précise

⇒ gain faible

PROGRAMMATION

Interroger le périphérique en boucle

+ Simple
- Gaspille le CPU
- Gaspille de l’énergie
- Peu précis

```
int main()
{
  while (true)
  {
    input();
    update();
    draw();
  }
}
```

Réagir aux inputs

+ Précis
+ Consomme peu de CPU
+ Consomme peu d'énergie
- Compliqué

```
void onKeyDown(…)
{
  …
}

void onMouseMove(…)
{
  …
}

int main()
{
  while (true)
  {
    update();
    draw();
  }
}
```
